

MDMG EXPANDS MD GROUP MICHURINSKY HOSPITAL BY LAUNCHING OPHTHALMOLOGY AND EYE MICROSURGERY CENTRE

23 September 2025 – MD Medical Group IPJSC (“MD Medical”, “Group” or “Company”; MOEX: MDMG), a leading Russian private healthcare provider, announces the opening of an Ophthalmology and Eye Microsurgery Centre at its MD Group Michurinsky hospital in Moscow.

The new centre’s unique proposition is founded on three pillars: the expertise of its leading experts, cutting-edge medical technology, and the comfortable environment characteristic of MDMG clinics. The centre will be led by Sergey Abramov, PhD (Med), a top-tier ophthalmic surgeon with over two decades of experience and more than 30,000 surgical procedures performed.

The facility is equipped with the latest technology from premier global manufacturers, including next-gen femtosecond lasers, state-of-the-art vitreoretinal surgery systems, and advanced laser treatment and diagnostic equipment. This instrumentation enables our doctors to employ innovative and proprietary methods for vision correction and eye microsurgery. The combination of world-class staff and cutting-edge technology allows for procedures of any complexity, including highly specialised surgeries performed by only a handful of experts in Russia.

As a 24/7 multidisciplinary hospital, MD Group Michurinsky boasts comprehensive infrastructure that includes an intensive care unit, operating theatres, diagnostic rooms, and a full team of health professionals complementing one another. This integrated environment enables us to offer surgical ophthalmology services to patients with comorbidities, ensuring seamless support from other medical specialists. The facility serves as a one-stop-shop for all stages of care, from the initial consultation to full recovery, saving patients time and effort – a critical advantage for those with limited mobility.

Though opened just two years ago, the MD Group Michurinsky hospital has already become a significant contributor to the Group’s revenue in the Moscow Region. This additional investment in its expansion and broadening the range of its healthcare services represents a key strategic step. It is aimed at consistently enhancing the quality of medical care, increasing access to modern diagnostic and treatment capabilities, and improving long-term financial performance. Total investment in opening and equipping the Centre was RUB 280 million financed entirely through the Company’s own resources.

MD Medical CEO Mark Kurtser said:

“I am delighted to announce the opening of a new world-class ophthalmology and eye microsurgery centre, created to implement the most progressive methods for diagnosing and treating eye diseases. Our centre offers a comprehensive approach to preserving and restoring vision, built upon the extensive experience of leading experts like Dr. Abramov, advanced technology, and a personalised approach to each and every patient.

Notably, the hefty investments required to develop our hospitals are profitable in the long run: they improve our patients’ quality of life, expand our range of services, and strengthen our reputation and the trust our patients place in us.”
