MD MEDICAL GROUP IS EXPANDING ITS RADIOLOGY CAPABILITIES IN KALININGRAD

12 November 2026. MD Medical Group IPJSC ("MD Medical", "Group" or the "Company"; MOEX: MDMG), a leading Russian private healthcare provider, announces the expansion of outpatient facilities in Kaliningrad, where the Group is represented by one multidisciplinary center and two MRI centers, which became part of the Group in May 2025 as a result of the acquisition of the Expert medical centers.

A multidisciplinary clinic, offering a wide range of medical services and covering a total area of 995 sq.m., has completed renovations and opened a new radiology department, where the Philips MR 5300 MRI with AI technology and a modern digital X-ray machine have started operating.

Philips MR 5300 is a 1.5 Tesla MRI scanner. Artificial intelligence technologies are used to speed up certain scanning stages and get detailed images. The SmartSpeed technology helps reduce scan time. Motion Free technology helps compensate for patient movement during imaging, which is especially important for patients who find it hard to stay completely still during the exam. The machine has a larger tunnel diameter compared to standard models, making the scan more comfortable for patients who struggle with being in tight spaces.

The opening of the new department has become an important milestone in the development of the full-cycle clinic. Now, at one branch, a patient can undergo the necessary tests, get a doctor's consultation, receive treatment, and recover. The new department has expanded the capabilities of the clinic, which is already popular with Kaliningrad residents and offers doctor consultations, ultrasounds, lab tests, functional studies, day care, physiotherapy, exercise therapy, and massage.

The new department has the capacity for 32,000 visits per year. The total investment in opening and equipping the department amounted to RUB 155.6 million. This investment was financed from the Company's equity.
